Did you learn what you expected?

Yes and more things

It was a good and complete introduction to web programming.

yes

I learned what was in the syllabus. This course was included in my program and honestly I wasn't very interested in it.

yes

Yes, I learned more than expected. Great course!

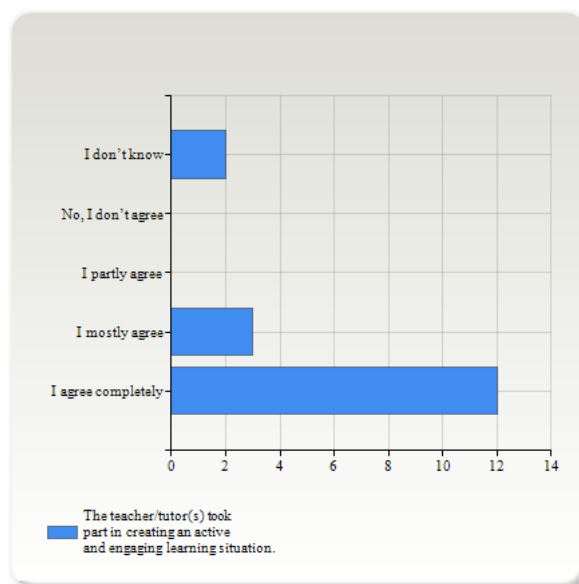

there was really unclear on what would be necessary to do to reach a certain grade the requirements to pass was really clear but the course and teachers were great

Yes. An additional lecture on optimization for mobile devices would be nice to have, if it fits into the tight schedule.

Learning situation:

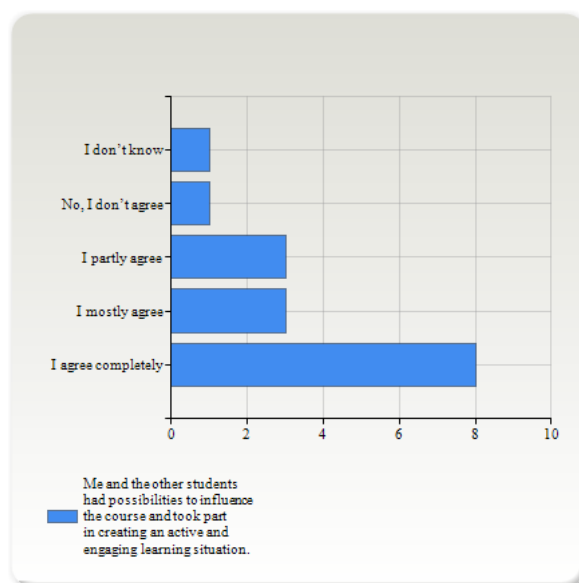

The teacher/tutor(s) took part in creating an active and engaging learning situation.

one of the best teachers in LNU

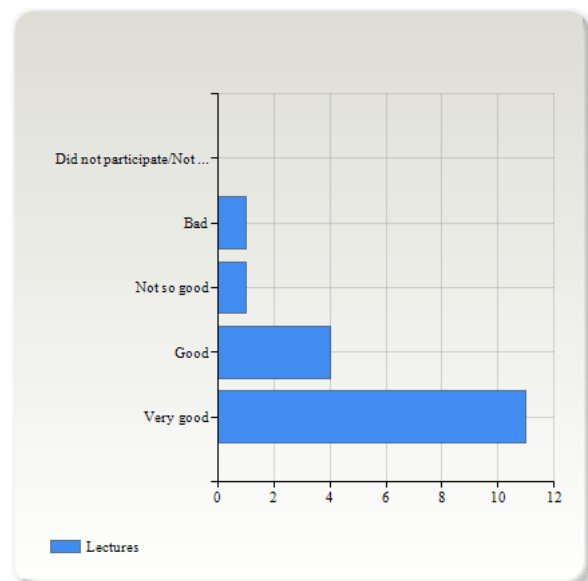

Johan Was probably one of the best lecturers that i have had on lnu was really engaged and it felt like he had a passion for the subject

The lectures were very interesting to follow. Johan seems to be a very nice guy. He and his staff were always available in case of questions.

How do you value the different course elements?

We need more laboratory in vaxjo

More time for the last assignment.

The lecture materials are pretty much useless. Only available online, and the structure is so confusing even the teacher got lost in them during lectures. I get it that using github is cool and stuff but that doesn't justify shoving everything in there. Please just stick to PDFs that are more user-friendly and actually useable.

the labs was a good way of learning things and i think that they also showed a good way of what we can do with what we learned. but something about the lectures that can be improved is that they actually could at a lot of the time be more informative about the stuff that is needed to be learnt for the labborations because it is a little bit too much of 'self learning'.

More slots for face-to-face examination would be nice. But that's just a minor complaint in an overall very good course.

Is there something else you would like to describe? Did you have any extra positive experiences from the course? In what way can the course be improved? Tell freely! What do you think?

Is there something else you would like to describe? Did you have any extra positive experiences from the course? In what way can the course be improved? Tell freely! What do you think?

A lot to do they need to take it easy on us :)

The course is awesome. It is vey up to date. It would be nice to encourage students to use modern frameworks in the assignments. In addition, rather than focusing on small aspects such as dragging, it would be nice to add some another features because in real world we gonna use frameworks and they gonna do it automatic. Features could be to make CRUD website or cross platform desktop app using modern framework. It will gives hands on experience to the students. For grading this, call all the students in the class and tell them to present it in front of all. This will help students to see each other students.

It was such a nice course. I learned a lot!

I understand that it gets stressful for both the lecturer and us students when periods might differ by two weeks. However Laboratory 2 was too stressful. The idea of making async/AJAX request was taught one week before the submission due next week in the morning. For next years term which probably is 9 weeks. Get the information on how the async requests work, cut down on some of the history which almost took half the lectures at some point. It is understandable why you go through the history but it makes it too stressful for some students that aren't that used to JavaScript.

Templates should've been discussed a bit more as well, since they're more or less one of the main ideas on client sided JavaScript.

i think that information was delivered a bit to late at all times with evrything in the course it was late information about submissions and the lectures about things that was on the labborations was late to the due dates but that might have been that the course only was in 9 weeks.

But need to say this again Johan is an Amazing lecturer.
